

## Property/Real Estate website

Please note: The website needs to be custom website. Strictly no WordPress, Wix or any other platform. It needs to be 100% custom using CSS, html, JavaScript etc.

This property website is different from other property website since it has introduced some new features.

Please have a look on the following features:

- Buying and selling property
- Dealers/agent finding
- Auction property
- Developers
- Joint venture
- Book for viewing
- New launching project
- Invest in property
- Find investor
- Property expo
- News 

As you can see there are few features that are new and different from the market. Which is joint venture, invest, auction property etc.

System should allow new user to sign up and create their account. Once the user has sign up, they will have the following access:

- Add property / edit / delete
- Able to book for viewing
- Contact the developers and agents
- Post a property to raise funds/investments

Please contact me if you can handle this task.

Note: Must follow the given time and long delay on task will not be accepted.

Waiting to hear from you. Thank you in advance.
